

ChemDri
Volatile Dry Spotter

“ChemDri”

An effective dry volatile spotting agent for use on dry, or greasy pick-up soil or stains. It is ideal for touch-up work, and for other post-spotting, as it dries quickly and completely. It feathers out easily, and leaves no residual odor.

- *Dry spotter for touch-up and other post spotting*
- *Effective removal of dry-side stains*
- *Combine with Spray Spotter[®] 2:1 for unidentified stains*
- *Contact us for pricing and available sizes*

DIRECTIONS

For touch-up spotting: Apply ChemDri[®] to stain with clean gauze or tip of spotting brush. Rub lightly with gauze or tamp with brush. Feather the area to avoid ring formation by working from center of the stain out to dampened edge, or on the board with vacuum and air.

Unidentified stains: Mix two parts of ChemBrite Spray Spotter[®] with one part of ChemDri[®] to safely remove the stain.
